

## Aviation Headsets for Recreational Pilots

If you are a recreational pilot then you will need an aviation headset. However, you may be wondering what brand would be best for you as well the reason why you need one. Keep reading to find out more about aviation headsets for recreational pilots.

Two of the most popular aviation headsets are the Telex headset and the Peltor headset. Both of these brands provide recreational pilots with wonderful quality and functionality. One of the functions of these headsets is to protect your hearing so you will want to find out which brand will protect your hearing the best. The last thing you want to do is damage your hearing because you chose the wrong headset. Fortunately, both a Telex headset and a Peltor headset will offer you great protection. So, perhaps the better question to ask is which one is best. Both of these headsets have their benefits as well as their drawbacks so make sure you talk to other recreational pilots who use or have used each of these headsets. Ask them which they liked best and why. Also ask what features they didn't like about the headsets. This information just might help you make the right decision for you. For example, you may really like a padded headset but don't think about this option until you have already bought one and tried it on only to realize it hurts your head. So, make sure you read reviews and ask as many questions as possible before you purchase a headset to make sure you get just what you need.

Price is another factor when it comes to aviation headsets for recreational pilots. Because of this you will want to search the Internet for the best prices for both Peltor headsets and Telex headsets. You may find them much cheaper and still brand new on the Internet than you would in a store. Saving money is a good idea and you can do so by searching the web for the cheapest headsets out there.

Also, while you are shopping for headsets don't forget to ask questions. Ask about the size, the fit, the noise reduction, as well as the overall rating of the particular headset. When you ask several users o these headsets it won't take you long to determine the best one on the market and the right one for you.
